FOR IMMEDIATE RELEASE

Scherr Technology & i2-Services, Inc. Offer Custom SPAM Resistant Forms

New York, USA (November 23, 2007)

Scherr Technology is proud to announce the creation and implementation of a new SPAM resistant web form for our client's websites. Using a combination of Captcha and multi-part confirm, we have created a form that is virtually impervious to most spam bots or malicious hijacking attacks. We know nothing can stop all spam from coming through, but hopefully our continuing efforts will keep unintended usage of Scherr Technology / i2-Services online web forms to an absolute minimum.

What is Image Verification (Captcha)? A security test to determine whether or not the user is human. This will ensure that only human visitors will actually submit the form, and not spamming bots that are browsing the web from site to site and submit spam where they can. It is well known that programmers can do programs for many jobs, including visiting a large amount of sites on the Internet by following links from page to page and collect emails listed on websites, submit contact forms, or even trying to break passwords by trying to login over and over again with computer generated passwords. Fortunately, it is impossible for a non-human (ex. computer program) to extract a word or a combination of letters and numbers from an image, if the letters and numbers are not all of the same size and of similar font. This is why, the Image Verification security method ensures that only people actually can submit a form.

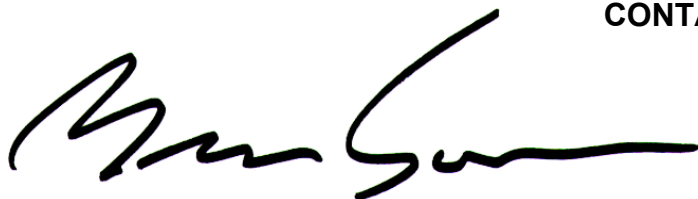

About i2-Services, Inc.

Looking for an advanced solution to manage and process HTML forms on your website? Form Manager is a do-it-all website tool for retrieving information entered by website visitors. Features include administrator back-end, single as well as multiple page forms, logging, customized emails sent to administrator and recipient, file uploading & more!
